PROFESSIONAL SUMMARY

Full-stack Software Engineer with 9 years of experience building scalable cloud applications and high-availability tools. Loves designing and building optimal solutions, with a track record of shipping high-impact apps at Microsoft that saved hundreds of thousands of dollars and vastly improved supply chain cycle times. Currently building and shipping AI-powered web products independently, with a focus on LLM integrations and modern full-stack architecture.

WORK EXPERIENCE

Independent Software Engineer

Jul 2025 – Present

Self-Employed · Remote

Building and shipping full-stack web products independently after leaving Microsoft, focused on AI integrations and modern web architecture:

- Launched AgentVim (agentvim.com): an AI-powered coding interview simulator with real-time LLM feedback, multi-language in-browser editor, and persistent interview history. Built on Supabase Edge Functions with streaming LLM responses.
- Shipped Tenfold (tenfoldcards.com): a narrative roguelike web game built on TanStack Start (React 19, Vite 7) with SSR on Cloudflare Workers. Tuned game balance via automated Monte Carlo simulations over thousands of synthetic playthroughs.
- Exploring an AI-powered investment screener with market sentiment analysis using LLM agents.

Software Engineer, L60 → L62

Jul 2019 – Jun 2025

Microsoft · Seattle, WA

Engineered full-stack solutions to scale Azure Cloud Supply Chain (supporting Azure's ~37% YoY growth):

- Delivered a web app to onboard 10,000+ data center configurations onto Azure engineering systems - eliminating 1,000+ hours of manual Supply Chain cycle time and ensuring downstream systems always reflect the latest parts.
- Built a data center parts search tool that saved ~\$500K annually and won the CSCP Stellar Quest Award:
 - Designed a responsive Angular 16 UI with Part Change History, real-time filtering, and search with millisecond latencies via Azure AI Search.
 - Created a Chat Agent using prompt engineering and Azure OpenAI APIs for natural language search queries.
 - Demoed across internal forums (AHSI Week of Learning) to broaden adoption.
- Designed an API Service handling 2,000+ hardware part qualification requests - cutting days off each cycle time via poll-based schedulers; shipped with 85%+ integration test coverage.
- Built an API Dashboard for a service processing 1M+ calls/day, enabling proactive issue detection before Sev incidents.
- Created a Rack Deployment timeline visualizer, enabling stakeholders to pinpoint and annotate delays, improving planning transparency.
- Won Honorable Mention at Microsoft's 2024 Global Hackathon for a Part Tracker App that maps parts across all deployed data centers.
- Reviewed 10,000+ lines of code; set up CI/CD via YAML pipelines; patched 15+ security issues under Microsoft's Secure Future Initiative.
- Mentored new hires and vendors - defining the technical direction of new features; provided on-call support resolving 100+ live site issues within Azure SLAs.

Tech Stack: C#, TypeScript, Angular, Kubernetes, MySQL, YAML, Azure Service Bus, Redis, Azure OpenAI APIs

Software Developer

Aug 2016 – Jun 2019

PNI Digital Media · Vancouver, BC

- Architected a multithreaded desktop app that fulfilled DVD photo orders across all Costco US Photo Labs — delivering ~8x speed improvement via multithreading and cutting data egress by 50%+ with server-side caching.
- Implemented features and resolved high-impact bugs for Costco and Staples MVC e-commerce sites serving 1M+ users/day; optimized data structures to shave ~1 second off high-traffic pages.
- Built a load testing framework to simulate holiday traffic spikes, improving resilience before peak seasons.
- Identified and patched OWASP Top 10 vulnerabilities across production systems, preventing potential security breaches.

Tech Stack: C#, Angular, JavaScript, Redis, Elasticsearch, MySQL, Azure

TECHNICAL SKILLS

Languages: C#, Java, Python, JavaScript, TypeScript, SQL (MySQL)

Frameworks & Libraries: Angular, React, TanStack Start, .NET / ASP.NET, YAML pipelines

Cloud & Infrastructure: Azure (Service Bus, AI Search, OpenAI APIs, DevOps), Kubernetes, Redis, Supabase, Cloudflare Workers

AI & LLMs: Prompt Engineering, Azure OpenAI, Claude, Gemini, OpenAI APIs, streaming LLM integrations

Tools & Practices: Git, CI/CD, UI/UX design, Elasticsearch, REST APIs, Agile/Scrum

EDUCATION

B.ASc. in Computer Engineering May 2015

University of British Columbia · Vancouver, BC
